## **I. Introduction**

This report provides a systematized view of the statistics on assets and liabilities of the Central Government, the Central Bank and Government Companies. The figures correspond to the 12 months of each year from 1992 to 2009, and for 2010 correspond to provisional statistics of the second semester.

This information is the result of a joint effort of different institutions. For the Central Government, the sources are the Comptroller General of the Republic (CGR), the Treasury Service (TS) and the Budget Office (Dipres). The Central Bank has collaborated closely with the Ministry of Finance in providing figures on its financial assets and liabilities in the format required for this report. As of 2002, the Central Bank began to include in the notes to its balance sheets the details necessary to reconstruct the figures that are presented in this report. The information on government companies was obtained from the audited financial statements, while data on guaranteed debt of the rest of the public sector was provided by the Treasury Service. Statistics on recognition bonds were provided by the Social Security Institute (in Spanish, IPS), ex Social Security Normalization Institute (in Spanish, INP).

## **II. Description**

### ***II.1. Net Debt of the Central Government***

At the end of June 2010, the gross debt of the Central Government totaled Ps. 7,237,551 million, equal to 7.0% of GDP, a nominal raise of Ps. 1,618,328 million compared with December 2009. Investments in financial assets totaled Ps. 17,694,437 million in the same period, equal to 17.0% of GDP, a reduce from 0.2 percentage points compared to December 2009.

The increase of gross debt despite the minor increase in financial assets resulted in a decrease in the net creditor position of the Central Government, which fell from 11.1% to 10.1% of GDP between December 2009 and June 2010.

## ***II.2. Net Debt of the Central Bank of Chile***

The Central Bank of Chile liabilities were equal to 12.9% of GDP as of June 2010, 3.4 percentage points lower than December 2009. Central Bank assets were equal to 14.5% of GDP as of June 2010, a decrease of 3.3 percentage points in comparison to December 2009.

The Central Bank recorded net liabilities of –Ps. 1,675,572 million as of June 2010 as measured in this report, going from a net surplus equal to 1.56% to 1.61% of GDP at the end of 2009 to June 2010.

## ***II.3. Consolidated Results***

The consolidated gross debt of the Central Government and the Central Bank of Chile was equal to 19.3% of GDP as of June 2010, 2.7 percentage points lower than it was at the end of 2009. The consolidated net creditor position as of June 2010 was equal to 11.7% of GDP, a decrease of Ps. 533,275 million compared to the close of 2009.

## ***II.4. Amortization Profile***

The amortizations of consolidated debt of the Central Government and Central Bank have been decreasing. The payments for 2010 will be Ps. 3,461,373 million, 98.3% of which corresponds to Central Bank debt. From 2011 to 2013, amortization maturities will average Ps. 1,635,850 million, with Central Bank debt accounting for 80.3% of the total. Debt maturing from 2014 to 2017 should average Ps. 677,895 million a year, 49.7% corresponding to Central Government debt. After 2018, 77.2% of the payments correspond to the Central Government debt.

Amortizations in 2010 according to maturity and denomination include: 75% in peso-denominated debt, 23.9% inflation link instrument (UF: Unidades de Fomento), and 1.1% debt payable in dollars.

For the remaining periods analyzed, the predominance of local currency debt held relatively stable even though the share of amortizations in inflation link instrument debt rose.

Amortizations maturing between 2011 and 2013 on average represent 83.4% of local currency or inflation adjusted currency debt. This figure is expected to increase an average of 92.3% for the 2014 – 2017 period.

## ***II.5. Government Companies and Recognition Bonds***

This report includes complementary information on the financial assets and liabilities of government companies, and on the stock of outstanding recognition bonds. These liabilities, assets and debt are different in nature from what is considered public debt, and in keeping with standard international practices, they are presented separately and are not consolidated with the statistics on the Central Government and Central Bank. In this manner, it supplements and enriches the available information without distorting it and facilitates international comparisons related to public indebtedness.

When debt indicators are relatively low, which is the case for a great majority of government companies, their indebtedness consists of liabilities that have been assumed based on the capital of each corporation. These liabilities are backed by investment projects under way that must be financed by future operating revenues without compromising public credit, except for debt under government guarantee, which is identified separately.

As of June 2010, Government Companies recorded an increase in their liabilities. The gross debt of Government Companies was equal to 6.7% of GDP (Ps. 6,945,105 million), 0.1 percentage points lower than compared with December 2009. At the same time, financial assets raise Ps. 99,936 million to reached 0.6% of the GDP. The net debt of these companies was equal to 6.1% of the GDP.

In exceptional cases, when financial assets were not enough to guarantee the debt of government companies at a reasonable cost, the government has stepped in to guarantee part of the debt. Guaranteed debt for government companies has remained relatively stable, equaling 1.8% of GDP as of June 2010, or Ps. 1,825,369 million, with 32% pertaining to Empresa de Ferrocarriles del Estado (the National Railroad Company), and 35% to Metro (the National Subway Company). 83% of this debt was issued locally and 17% in the external market.

Finally, recognition bonds represent a government liability owed to affiliates of the old pension system who changed to the new pension fund system (AFPs). Although this liability is of a different nature, future payments will be required and must be considered. As of June 2010 the stock of recognition bonds was equal to 6.4% of the GDP, in line with the downward trend begun in 1985 that is projected to continue over the coming years (see Appendix 4).

(a) Includes Corfo Debt and BTU.

(b) Excludes receivables due from the government under the old system.

(c) The figure given for Central Government domestic debt differs from that of the Central Bank because this report, for the purpose of government promissory notes, considers only the capitalization of interest at the dose of the quarter.

(d) Includes the Economic and Social Stabilization Fund, the Pension Reserve Fund, the Petroleum Stabilization fund, the Infrastructure Fund, and the central government investment fund in foreign currency.

(a) Includes Corfo Debt and BTU

(b) Excludes receivables due from the government under the old system.

(c) The figure given for Central Government domestic debt differs from that of the Central Bank because this report, for the purpose of government promissory notes, considers only the capitalization of interest at the dose of the quarter.

(d) Includes the Economic and Social Stabilization Fund, the Pension Reserve Fund, the Petroleum Stabilization fund, the Infrastructure Fund, and the central government investment fund in foreign currency.

## APPENDIX 1

### Assets and Liabilities of the Central Government

#### a. Explanation of figures

##### *Liabilities*

Central Government debt is comprised of domestic and foreign debt of the Treasury Service and Corfo. The figures presented in this report are based on data from the Budget Office (Dipres) and the Treasury Service that have been harmonized to satisfy the requirements of this report.

Local currency debt is domestic debt of the Central Government and the Central Bank, the stock of papers in UF and pesos issued on the domestic market (BTU and BTP), and the domestic debt assumed by Corfo.

##### Foreign currency debt

- *Domestic debt:* Debt owed by the Treasury Service to the Central Bank.
- *Foreign debt:* Debt of the Treasury Service and Corfo issued abroad in local and foreign currency, provided by Dipres. The figures differ from the foreign debt figures of the Central Government presented by the Central Bank in its two-week reports, mainly because the Central Bank does not include bonds issued by residents and held by nationals.

### ***Assets***

Local currency assets excluding government companies: Figures provided by the Comptroller General, presented in the Public Sector Equity Statements under the items local currency in cash, investments and placements in local currency in deposits, promissory notes, stocks and other securities and instruments; and loans in local currency, excluding loans to other government agencies and other loans.

Financial debt of government companies with the government: The financial debt of government companies obtained from their balance sheets and excluding income tax and deferred taxes.

Foreign currency assets: Cash in foreign currency investments and placements in foreign currency in deposits, including the Economic and Social Stabilization Fund (ESSF), the Pension Reserve Fund (PRF) and the Oil Price Stabilization Fund (OPSF); and loans in foreign currency to employees. Placements in foreign currency–denominated stocks are excluded because they correspond to shares of the government in international agencies that are permanent in nature.

## APPENDIX 2

### **Assets, Liabilities and Amortizations of the Central Bank of Chile**

The information on assets and liabilities of the Central Bank of Chile are figures published in the balance sheets of the Central Bank of Chile, although the classification criteria may differ. However, starting with publication of the balance sheet of December 2002, the Central Bank of Chile disclosed details to allow the replication of the figures presented in this report.<sup>1</sup>

Below is a description of the contents of each item in this publication as well as the nature of the information on the amortization schedule.

#### ***Liabilities***

Notes issued by the Central Bank: Corresponds to the amount of notes, excluding interest and advance discounting. Bills issued for the purchase of overdue portfolio from banks (1989–1996) are also excluded.

Fiscal deposits in local and foreign currency: Includes deposits in the OPSF, funds for special international agency programs, the Infrastructure Fund and other deposits by the government. The assets from credits financed by international agencies are deducted from deposits in local currency.<sup>2</sup>

Other: The sum of other deposits and obligations, plus amounts in other liability accounts, plus the purchase of dollars under a net resale agreement (if the net balance is a liability), plus swaps and other foreign liabilities, excluding DEG allocations.

---

<sup>1</sup> Except for the local currency/foreign currency separation in other liabilities and assets.

<sup>2</sup> Since the commercial risk is assumed by the Treasury Service, it was deemed appropriate to consider it a reduction in liabilities instead of an asset.

***Assets:***

Reserve Assets: In order to homologate the series through 2001, it includes reserve assets plus interest collectible abroad, less reserve liabilities, excluding from the latter liabilities under swaps. This concept was added as of 2002 to the book measurement of reserve assets.

Fiscal notes in local and foreign currency: This corresponds to notes that originated from fiscal transfers to the Central Bank under Laws 18,267 and 18,768. Prepayments of interest or principal are deducted from notes in dollars.

Other: This corresponds to the sum of credits to commercial banks plus the credit to Banco Estado, plus the credit to government companies, excluding credits to Corfo associated with popular capitalism (Law 18,401) and credit facilities using Treasury Service funded from international agencies; plus credit to other institutions, excluding the Central Savings and Loan Fund and the National Savings and Loan Association; plus contributions to International Agencies; plus other amounts in other assets abroad; plus other amounts in other asset accounts, excluding deferred loss, interest and advance discounting; plus the purchase of dollars under a net resale agreement (if the net balance is an asset).

Subordinated Debt:<sup>3</sup> For greater transparency, the amount of subordinated debt is presented even though it is not considered an asset of the Central Bank. Associated liabilities are subtracted (bills issued for the purchase of portfolio and subordinated debt provisions) and adjusted retroactively from 1989 to 1997 because of the deferred loss.

---

<sup>3</sup> Through 1995, this was a transaction by which some commercial banks had to allocate a fraction of their surpluses to servicing, for an indeterminate period of time, debt assumed by the Central Bank because of the financial crisis in the 80's. In that year, Laws 19,396 and 19,359 were enacted that empowered banks unable to extinguish the debt in a period of 40 years to pay the debt by issuing new shares that were either listed for trading or given in payment. The difference between the book value of the debt and the market price of the shares resulted in a book loss that was deferred under such laws for absorption by subsequent surpluses.

***Amortizations:***

The amortization program only includes notes on the over-the-counter market. The combined balance is equal to more than 99% of the total. The figures have been obtained from scheduled maturities that include principal and interest so the component of interest to be deducted had to be defined. In the case of notes with coupons, the amount of the respective coupon payment considered as interest has been considered as such, and for instruments that are redeemed with a single payment, the original issue discount has been considered as interest.

The scheduled amortizations exclude interest accrued and not yet serviced, which forms part of the scheduled payments considered to be interest. Moreover, the scheduled payments of principal on notes with coupons do not include the premium or discount balances at which the instruments were placed because coupon rates were used instead of historic placement rates.

Notes:

Privatized companies are not included in the consolidated figures for government-owned companies from the time of their privatization.

N/I: No information

In 1989 ESVAL was created as an anonymous corporation.

In 1990 Servicio de Obras Sanitarias was converted into 11 regional anonymous corporations.

In 1990 the General Management of Metro was converted to Empresa de Transporte de Pasajeros METRO S.A.

In 1998 EMPORCHI was divided into 10 autonomous, anonymous port companies.

ESSAN S. A. has included the financial statements of ESSAT, EMSSAT, ESSCO, ESSAM, ESSAR, EMSSA, ESMAG and ESSAN since September 2004.

## **APPENDIX 4**

### **Recognition Bonds**

Recognition bonds are an obligation of the Chilean State owed to future pensioners, which will come due as they retire. This financial instrument therefore makes explicit the debt owed to workers who formerly contributed into the old social security system.

These obligations are not conceptually different from other social security obligations in other countries. The practical difference is that in most countries, these obligations are accumulated as future spending commitments through a social security system that are not recorded in the accounting. This is what has been commonly called the implicit social security debt of nations.

Virtually no country, either developed or developing, records social security commitments or implicit social security debt as part of the public debt.

The Recognition Bond is calculated as the necessary principal for the affiliate, who changed over from the old system, to receive a pension equal to 80% of the pensionable salary earned between September 1978 and 1979, save exceptions, multiplied by the proportion of his or her active life during which he paid into the old system. This amount is compounded at a real rate of 4% annually from the time of the change to the new pension system.

When the beneficiaries meet the requirements for retirement, the bonds are redeemed by the Pension Fund Managers (AFP). The Government, through the Social Security Institute (in Spanish, IPS), ex Social Security Normalization Institute (in Spanish, INP), transfers a lump sum that is recorded as below-the-line financing in the new presentation of the fiscal figures of the Central Government. This redeemed bond is added to the affiliate's individual capitalization fund and used to create a future pension flow in any of the possible modalities.

The number of bonds issued and redeemed from 1982 to June 2010 is presented in the table below.

The stock has decreased over time as a percentage of GDP.

### Recognition Bonds Redeemed and outstanding bonds

	N° of bonds redeemed	Outstanding bonds Current amounts (a)	
		MM Ps.	% GDP
1982	371	488,454	41.4%
1983	3,229	637,962	42.5%
1984	4,324	817,449	44.1%
1985	4,599	1,082,006	40.7%
1986	6,439	1,330,766	37.3%
1987	8,442	1,691,879	35.6%
1988	9,365	1,939,343	31.0%
1989	9,994	2,420,769	31.5%
1990	11,424	3,222,179	33.0%
