Figure 2: Quarterly returns in dollars (TWR) (percent)

⁽b) Since inception returns for Sovereign and Government Related Bonds, Inflation Indexed Sovereign Bonds, Corporate Bonds and Equities are calculated since December 31th 2011. Since inception returns for US Agencies MBS and High Yield bonds are calculated since January 22th, 2019. Since inception returns for the short term portfolio are calculated since October 1st, 2020. Total Portfolio returns in USD and returns in CLP are calculated since March 31, 2007.

⁽c) Returns in CLP corresponds to the sum of the percentage change of the exchange rate CLP/USD and the return in USD.

² Returns for periods of more than one year are compound annualized rates while those for less than a year correspond to the change as seen in the stated period. To meet high standards of transparency and provide a better assessment of the gains or losses on investments, the Ministry of Finance discloses the fund's return in different time horizons and currencies. With respect to the time horizon, it is important to note that, in keeping with the medium-and long term investment policy, the return assessment should focus on that period, disregarding fluctuations that may occur monthly or quarterly. With regard to returns expressed in different currencies, the return in US dollars allows for an assessment which is more in line with the investment policy given that the fund's resources are wholly invested abroad and in foreign currencies. The return in Chilean pesos is also disclosed. This return reflects changes in the pesodollar exchange rate and, therefore, may experience greater fluctuations. Finally, as with any investment, returns obtained in the past do not guarantee future positive results.
